

QUALITY ANIMAL FEED SUPPLEMENTS

Concentrates - Nutrition Advice - Molasses Blocks
Ration Formulation - Mineral Supplements

WETPHOS 5

SUPERIOR PALATABILITY, HIGH IN PHOSPHORUS & ULTRA WEATHERPROOF

Although Phosphorus concentration in pasture is higher during the wet season, it can also be the period where it's deficiency has the greatest impact on production rates.

- Ideal for Cattle, Sheep & Goats
- Very high levels of phosphorus which may greatly improve calving rates & reduce calving losses
- Highly palatable molasses based block with added urea, protein meal & trace minerals

WHY USE WETPHOS 5

- Extra hard waterproof formula
- 8% Phosphorus 11% Calcium
- Highly palatable but low in salt, stock wont overconsume
- 5% Urea to maximise intake of crude protein from pasture

ANALYSIS / kg	WETPHOS 5
Energy DM	3.57 MJ
Protein Meal	4.5%
Urea	5.0%
Total Protein	17.6%
Molasses	34.0%
Phosphorus	8.0%
Calcium	11.6%
Salt	2.00%
Sulphur	0.44%
Magnesium	2.80%
Vitamin A	IU 48 000
Iodine	20.0 mg
Cobalt	15.0 mg
Selenium	4.5 mg
Copper	300.0 mg
Zinc	500.0 mg

RECOMMENDED INTAKE PER HEAD PER DAY

DRY COWS	60 - 100G
LACTATING COWS	140-200g
GROWING STOCK	40-60g

WETPHOS 5 WITH 8% PHOSPHORUS ESSENTIAL FOR WEIGHT GAIN, HIGH REPRODUCTION PERCENTAGES & OPTIMUM CALF GROWTH RATES

Phosphorus is the most common nutritional deficiency with around 70% of soils in Northern Australia being deficient. Phosphorus plays a vital role in energy metabolism in conjunction with calcium for optimum bone formation in cattle grazing tropical & sub tropical pastures.

Phosphorus is present in many parts of the animal's body. It is an important part of the chemical reactions involved in energy metabolism & transfer. Phosphorous requirements are subject to growth & production status with the highest requirements for growing young stock & cows in early lactation.

Phosphorus & Calcium work in conjunction to ensure a healthy metabolism & bone formation. Phosphorus deficiency results in decreased animal performance, reduced weight gains, poor reproductive rates, low milk production & poor calf growth rates.

WETPHOS 5 has been formulated to overcome these deficiency problems during the wet season ***8% Phosphorus** ***11.6% Calcium** * **Extra hard weatherproof formulation** ***Highly palatable but low in salt** * **5% Urea to maximise intake of crude protein from pasture**
